

## Research training

---

The activity of U966 is part of a highly dynamic field for teaching and research in **Microbiology and infectiology** within the University François-Rabelais of Tours in collaboration with the INRA Tours-Nouzilly centre.

In consideration of the LMD reform, the educational team of the university in collaboration with INRA (National Research Institute on Agronomy) offers a full Master 1 and 2 training course allowing students to gain specialised skills leading them to a master degree. The Master program is called Cellular and Molecular Infectiology, Vaccinology and Therapeutic Antibodies. This program is one of the three specialities of **Evolutional and Integrative Biology, Infectiology (BE2I)** of the Health and life sciences master degree.

Beyond the master program, the Infectiology PhD branch is one of the 4 components of the Doctoral School 549 “Health, Biological Sciences & Life Chemistry” which unites all the Health & Biology teams of Tours and Orleans.

The team was also a driving force for the creation of the Regional Cluster “Infectiology” and the Federation of Research in Infectiology (FeRI, FED n°4225) coordinated by Dr Nathalie Winter and Denys Brand.
